

Ever wish you could do more for your patients worried about breast cancer risk?

Offer a breast cancer risk assessment test that detects cellular changes within breast ducts early, before larger, potentially cancerous lesions might develop?

A test that will document your diligence in evaluating breast health?

A test that is noninvasive, objective, repeatable?

A test that takes your staff just 5 minutes to administer in your office?

An actual Pap test for the breast?

Finally, you can.

Introducing HALO – the world's first automated, reliable method to assess breast cancer risk and keep your patients informed.

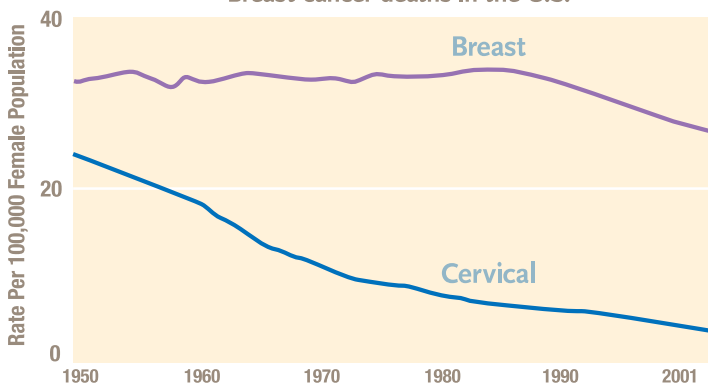

HALO. Here now.

HALO™
NAF Collection System
